SUMMARY

Computer Science student at PUC-Rio, admitted in **1st place in the program's entrance exam** and **full merit scholarship recipient from Fundação Behring**. For over a year I have been building real-world software and AI solutions in the Ignição program (Instituto ECOA PUC-Rio / Petrobras), working end to end: problem discovery, requirements gathering, architecture, implementation, testing and delivery. Hands-on experience with structured data, SQL, automation and intelligent document analysis. I am constantly looking for challenging environments that stretch my technical skills and let me create impact through technology.

EDUCATION

Pontifical Catholic University of Rio de Janeiro (PUC-Rio)

Aug 2024 – Jul 2028 (expected)

B.Sc. in Computer Science — 5th semester

- Admitted in **1st place in the program's entrance exam** (3rd in the Exact Sciences group); full merit-based scholarship granted by Fundação Behring.
- Solid foundation in algorithms, data structures, databases (SQL), Python and C programming, and software engineering.

PROFESSIONAL EXPERIENCE

Instituto ECOA PUC-Rio — Ignição Petrobras Program

Rio de Janeiro, Brazil

Software Engineering Intern — Delivery Track

Mar 2026 – Present

- Evolve validated MVPs into consolidated products adapted to Petrobras' technology environment, contributing to architecture definition, technical modeling, implementation and testing.
- Continuously refine solutions based on user feedback and observed inconsistencies, ensuring quality, robustness and adherence to institutional requirements.
- Collaborate with multidisciplinary teams and communicate technical decisions and results to stakeholders.

Development Intern — Discovery Track

Jun 2025 – Mar 2026

- Built, across 3 consecutive cycles, MVPs of AI (LLM) solutions aimed at optimizing Petrobras' internal processes.
- Conducted user interviews, requirements gathering and technical feasibility analyses, translating ambiguous business needs into clear specifications.
- Presented results and impact at Pitch Days and Demo Days to technical and executive audiences.

Python Programming Teaching Assistant — CTC/PUC-Rio

Mar 2026 – Present

- Selected to support the Python programming course: help students with programming logic, debugging and problem solving, both in class and in weekly lab sessions.

SELECTED PROJECTS (IGNIÇÃO PETROBRAS PROGRAM)

Oráculo — Intelligent Document Verification

Python, Django, LLMs

- Web application that uses AI to automatically flag inconsistencies and divergences between documents and the company's internal standards, making document analysis faster and more structured.

Prisma — AI Assistant in the Microsoft Ecosystem

LLMs, WebPart / SharePoint

- WebPart integrated into Microsoft 365 that uses LLMs to support decision-making and continuous learning for employees.

Bee — Semantic Researcher Search

Python, Django, PostgreSQL, Embeddings

- Semantic search over a database of 8.9M+ researchers, using embeddings and a vector database to recommend the best-matched expert for each query; selected by Petrobras to evolve from MVP into a real-world application.

SKILLS

- **Languages:** Python, SQL, C, JavaScript, TypeScript
- **Web & back-end:** Django, Flask, Node.js, React, HTML, CSS, REST APIs
- **Data & AI:** LLMs, embeddings and semantic search (vector databases), recommender systems, PostgreSQL, automated document validation
- **Tools & practices:** Git, GitHub, VS Code, agile cycles (Discovery/Delivery), MVP, requirements gathering
- **Spoken languages:** Portuguese (native) • English (fluent — BRASAS certification) • Spanish (basic)
